

MAINTENANCE TIPS DURING COVID-19

Safety first – any repairs that directly impact the safety of your vehicle should still be addressed immediately.

Prioritize and schedule preventative service if it is required to maintain a valid warranty on your vehicle.

Ask your service center what safety protocols they are adhering to, like contactless drop-offs or vehicle pick up.

Wipe down and sanitize the interior of your vehicle before and after service to keep you and the technician safe.

Before going in for service, call ahead to confirm hours.

If your vehicle is going to be idle, top off your fluids, fill up the fuel tank, and consider a fuel stabilizer if the vehicle will be sitting for longer than three months.
